

Abacus[®]
Leaders in Lighting

THE COMPLETE PRODUCT RANGE FROM THE LEADERS IN EXTERIOR LIGHTING

EXTERIOR LIGHTING

LIGHTING THE WORLD BEYOND EXPECTATION

At Abacus we've succeeded in developing and supplying superior products for our customers in the high performance exterior lighting sector. Customers who demand energy efficient, attractive areas in which their own customers can feel comfortable and secure.

Many of our products incorporate patented high performance reflectors, recognised as delivering specified lighting levels which minimise energy outlay and project costs while providing uniformities second to none.

For over 60 years Abacus has focused its business on meeting its customers' needs, providing a design service of which we are justly proud. ISO certified for quality and environmental management, we offer an unrivalled, complete package of manufacture, supply, installation and maintenance.

Find out more about our lighting products and services online.

Our standards Use these icons to understand some of our key lighting features.

Low light pollution
This logo indicates a luminaire with ULOR of less than 2%.

ULOR
Upward Light Output Ratio. The ULOR value shows the proportion of upward light produced from the luminaire.

IP rating
This indicates the level of ingress against moisture or dust. The first digit shows you the dust protection, and the second the moisture protection.

IK rating
An international numeric classification for the degrees of protection provided by enclosures for electrical equipment against external mechanical impacts.

LED QUARTZ BOLLARD

Bringing you the next generation
in LED lighting technology...

LED QUARTZ BOLLARD AL9000

IP66

High performance, energy-saving technologies and flawless design: security lighting the Abacus way.

Energy-efficient

In recent years LEDs have advanced significantly to become one of the most efficient, attractive and versatile forms of lighting around. For a start, LEDs use far less electricity than standard sources, producing a better quality of crisp, white light. And where a traditional bollard would emit only 28% of the light it produces, the AL9001 Quartz has a superior 90% efficiency - credentials that make it one of the most energy-efficient security lighting systems of its kind.

Performance

Combine instantaneous, bright white light with our patented louvre-based design and the result is simply exceptional: crisp, focused light in a variety of energy-efficient beam patterns, with virtually no light escaping upwards. The bollard itself is tough and robust, made from hardwearing steel tubing protected by a durable, polyester-based coating. Anti-vandal screws give even greater protection against shocks or vibrations. The LED louvres are behind a 5mm thick polycarbonate cylinder, preventing any direct vandalism. And perhaps most importantly, LEDs don't lose performance over time in the same way as conventional HID lamps. So much so, in fact, that they last at least four times longer.

Economical and safe

Fitted with LED technology, our Quartz Bollard can reduce wattage by a sizeable 60% - 80%, meaning you'll not only save money on energy

bills - there's less cabling needed to install them too. No UV and less heat produced makes them safe for pedestrian areas. Not to mention the fact that their longer lifespan puts them miles ahead of the competition in terms of maintenance and replacement costs.

Visual effects

Whether you're installing bollards to give clear, visual instructions, enhance mood, highlight architectural features or even support your branding, our unique red, green and blue colour effects will create drama - without interfering in any way with the more functional white light being given off. For added visual impact, we can even print your logo, advertising or directional arrows on the top louvre ring, as shown in the picture to the right.

Features

- Sturdy IP66 die-cast aluminium head unit with clear polycarbonate outer cylinder (UV stabilised)
- Tough bollard shaft made from heavy duty steel CHS tubing
- Black or silver textured polyester coating on bollard shaft and head-unit castings
- Louvred light controller, with LED light pumped into and through the acrylic louvres, producing a controlled light output
- Operational equipment housed in the bollard itself, using IP67 driver on a fully removable tray, with facility to loop in and loop out electric cabling
- Emergency version available

Specification

All LED Quartz bollards, regardless of main colour, louvre rings and beam type, have the same product code – **AL9000**.

Individual requirements need to be specified when ordering – please see below for details. For emergency version, please enquire.

FIRST CHOICE FOR RETAIL

THE NEXT STEP

Following Abacus's success with our specially designed Orion series, the Orion LED is the next step for effective and efficient car park lighting.

Using a similar design, the Orion LED produces a square distribution which reduces the number of lighting points needed, whilst the total energy consumption is also reduced with more energy efficient LEDs.

Influenced by the Orion family, the slender design subtly blends into the skyline with its white canopy and carefully placed LED modules which result in less than 1% upward light output ratio.

How can we help you today?

CAR PARK & AMENITY LIGHTING

ORION LED AL4500

IP66

Benefits

- Asymmetrical beam distribution ideal for boundary mounting location to reduce overspill and wasted light
- Symmetrical beam distribution ideal for wide column spacings whilst maintaining light uniformity

Technical Features

- IP66 rated
- Available in symmetrical and asymmetrical beam distributions
- Acrylic bowl and white polyester powder coated acrylic top canopy as standard
- 3mm thick aluminium LED mounting plate
- Die-cast aluminium top cap heat sink
- Die-cast aluminium spigot
- LEDs are covered by lenses with an outer bowl on the main fitting
- L70 Hrs >60000
- L80 Hrs >60000
- Running current 1000mA
- Less than 1% upward light output ratio

- Colour rendering 77 (Ra)
- Colour temperature 4000K as standard
- Weight: 18.2kg
- Windage: 0.178m²

Applications

- Amenity
- Car park

Colour

- White canopy

Key features

All dimensions are in mm.

	Wattage (W)	Distribution	No. of LED Modules	Lumen Output (lm)	Power Factor	Luminous Efficacy (lm / W)	Running Current (mA)	No. of Drivers
AL4501	302	Symmetric	8	32036	0.994	106	1000	2
AL4502	231.6	Asymmetric	6	24795	0.989	107	1000	2
AL4503	153.8	Symmetric	4	16946	0.994	110	1000	1
AL4504	117	Asymmetric	3	12723	0.990	109	1000	1

Orion LED distribution

Fitting	No. of Columns	No. of Luminaires	Mounting Height (m)	Average Lux Level (Lux)	Uniformity	Total Energy Consumption (W)	Power Density
Road Lantern	12	24	8	25.47	0.33	6.000	0.600W/m ² /25 Lux
Orion LED	9	9	8	25.19	0.26	2.682	0.268W/m ² /25 Lux

Using back-to-back road lanterns mounted at 8m to achieve 25 Lux average, total energy consumption is 6000 Watts

Using Orion LED mounted at 8m achieving 25 Lux average, total energy consumption drops to 2682 Watts

OPTIMUM REFLECTOR STORY

Optimum Reflector System

This unique and patented reflector system was developed to provide high optical performance within a low profile body. The twin step reflector balances the light output between the areas below the lantern and the furthest areas away. Its unmatched uniformity and performance delivers economies on power, column and associated infrastructure costs.

The energy effectiveness of the Optimum Reflector System in comparison with standard reflector systems is clearly shown when the power density per unit illuminance level of an installation is measured. In examples below, we compare different systems based on a 100m x 100m area illuminated to 25 Lux from either 6m, 8m or 12m with a minimum uniformity of 0.25 Emin/Eave.

Shade
Asymmetric version, with internal 120° shield to restrict overspill

Optimum Reflector System
— Upper Reflector Tier for diffused reflection
— Lower Reflector Tier for main beam

CONVENTIONAL REFLECTOR SYSTEMS

9 x Lanterns at 12m: 1 x 400W SON-T

Energy Consumption: 3.87kW Power Density: 0.36W/m²/25 Lux
Cable lengths: 390m Columns/Foundation: 9

18 x Twin Road Lanterns at 8m: 2 x 150W SON-T

Energy Consumption: 5.4kW Power Density: 0.50W/m²/25 Lux
Cable lengths: 550m Columns/Foundation: 18

25 x Standard Reflectors at 6m: 250W SON-T

Energy Consumption: 6.9kW Power Density: 0.84W/m²/25 Lux
Cable lengths: 700m Columns/Foundation: 25

OPTIMUM REFLECTOR SYSTEM

4 x Orion at 12m: 2 x 400W SON-T

Energy Consumption: 3.44kW Power Density: 0.33W/m²/25 Lux
Cable lengths: 260m Columns/Foundation: 4

9 x Orion 2 at 8m: 400W SON-T

Energy Consumption: 3.87kW Power Density: 0.36W/m²/25 Lux
Cable lengths: 410m Columns/Foundation: 9

16 x Orion 3 at 6m: 250W SON-T

Energy Consumption: 4.14kW Power Density: 0.38W/m²/25 Lux
Cable lengths: 620m Columns/Foundation: 16

For comparison purposes the lighting levels are calculated on initial levels. Cables are assumed to lead to a central point on one side.
Optimum Reflector System Patent No. 1151226

ORIS LED AL3710

IP66

IK08

Benefits

- High performance amenity and road lighting with performance LED module
- Short install and maintenance time via tool-free opening hook
- Maintenance safety risks are reduced as power can be automatically switched off when the fitting is opened (available upon request)

Technical Features

- Weight: 13 - 14kg
- Windage: 0.06m²
- CRI: 80
- Colour temperature: 4000K as standard. Other temperatures available upon request
- Controls: Presence detector or Dali
- Rated life: 50000 hours at 700mA
- Classes I and II available
- Mounting; Spigot side entry ø60mm
Spigot post top ø60mm or ø76mm
- Six light distribution options available
- IP66 rated with IP68 vent
- IK08 as standard, option for IK10 available
- Incorporated driver
- Thermal regulation by an integrated heat sink
- Surge protector or over/under voltage protection (optional)
- Luminaire made of injected cast aluminium
- Tempered glass
- ULOR 0% (ULOR: Upward Light Output Ratio)
- Extra slim profile fitting with curved design

Applications

- Amenity

Colours

- Grey

Distribution options

The Oris LED is available in six light distribution options as seen in the following table.

Please enquire when quoting / ordering.

Light Distribution	Option	Description	Code
Asymmetrical	ASY01	Main & secondary roads, high visual comfort & almost zero glare (very low TI)	A
	ASY02	Normal to wide roads with adjacent channels (paths), wide spacing between light points	B
	ASY03	Narrow lanes, area to be lit targeted	C
Circular	CIR01	Atmospheric lighting of squares, car parks, town centres, pedestrian areas, parks & gardens	D
Symmetrical	SYM01	Atmospheric lighting of squares, car parks, town centres, pedestrian areas, etc. Axial installations (on median strips, on catenary systems, between pavement and bicycle path)	E
PC01	PC01	Completes lighting on protected crossings	F

U-LUM AL60300

IP66

IK09

The modern futuristic design of the U-LUM luminaire compliments the aesthetics of the city and integrates well in the urban environment. U-LUM LED light makes urban areas more appealing and inviting for people, while also saving energy, reducing your environmental impact and making these areas safe for children, pedestrians and cyclists.

Benefits

- Low maintenance
- Long lifetime
- Energy saving
- Smart driver
- Dimming options available

Technical Features

- Control: DALI or 1-10V
- Efficacy up to 113 lm/W
- CRI >80
- Colour temperature 4,000K (other upon request)
- Overload protection

Applications

- Road
- Architectural
- Amenity

Photometry

PATHSEEKER 2 AL3150

IP65

Benefits

- Optional photocell available
- Tamper-resistant cover screws available
- Simple to fix using external stainless steel brackets and two lower points, all external to gasket line to preserve IP rating
- Complies with M.O.D. JSP482 Chapter 8 Document 4 'Category C' areas

Features

- Strong pressure die-cast LM24 aluminium body prevents distortion when fixing and preserves IP rating
- Textured black full polyester powder finish
- Spacings up to eight times mounting height

- Impact-resistant, flame retardant prismatic polycarbonate cover
- Supplied complete with lamp
- Emergency pack: contact Abacus sales for price and availability

CAR PARK & AMENITY LIGHTING

CARICO AL22500

IP65

Benefits

- Internal drivers and electrics protected from the elements by the durable rated IP65 body

Features

- Power: LumaFit LED 33W (System wattage 36.6W)
- 115° optics
- Colour temperature 5000K as standard
- CRI: 85
- Array lumens: 4438lm
- Delivered lumens: 3114lm
- LumaFit LEDs on aluminium boards
- Dimmable driver

- Voltage 120 - 277V, 50/60Hz
- Die-cast aluminium back housing, finished in black powdercoating over a chromate conversion coat
- Cast-in template for ease of mounting over electrical boxing
- Colour matched hinged polycarbonate front housing with clear polycarbonate ribbed lens area
- 20mm coin plus with O-rings for conduit and photocell
- 5 year warranty
- Rated life: 50000 hours
- Operating temperature -40°C ~ + 40°C

- Direct mount of a 100mm recessed outlet box or using 20mm surface conduit
- Emergency version available

REVATI AL60601

IP66

A compact full cutoff wall mounted luminaire available in two Wattages. With a specially designed wide forward throw optical distribution, it replaces an HID lighting system of up to 150W MH or HPS.

Typical applications include; rail, ports, warehouses, retail and amenity

Mounting heights between 3 - 8 metres can be used based on light level and uniformity requirements.

Technical Features

- Die cast aluminium housing with full cutoff front frame, integral heat sink and driver compartment.
- Twist-lock photocell / smart controls adaptable.
- Nickel-plated stainless steel hardware.
- Black (RAL 9005) powdercoat finish over a chromate conversion coating.
- Clear one-piece molded Type IV polycarbonate lens.
- Includes Easy-Hang wall mounting bracket with built-in level. Optional trim plate is available for use in retrofit applications to cover wall surface blemishes.
- Electronic driver, 120-277V, 50/60Hz; Power factor >0.90.
- Standard internal surge protection is 2kV for 25W, 6kV for 37W. 0-10V dimming as standard.

- CE: Listed for wet locations.
- IP66 sealed LED compartment.
- 5-year warranty.
- Designed to operate in -40°C to +50°C environment.
- CRI: 80
- CCT: 4,000K (standard) & 5,000K
- L90 (25°C ambient): >100,000 hours

Applications

- Amenity
- Retail
- Rail
- Ports
- Warehouse

ABACUS – LEADERS IN ARCHITECTURAL LIGHTING

ARCHITECTURAL LIGHTING

LIGO AL11200 ROUND

IP67

IK10

Benefits

- Luminaire housing has a high resistance to UV and is treated with highly antioxidant water-repellent lubricating solution to lengthen lifespan
- Strong luminaire body can withstand a maximum static pressure load 2500kg for use in high traffic areas
- Stainless steel finish ideal for architectural use
- High efficiency thermoplastic with high vacuum deposit for heightened luminaire care
- Design allows for ease of maintenance

Technical Features

- In ground recessed uplighter
- Non-integral driver

- Powder coated die-cast aluminium EN AB 44100 body with AISI 316L stainless steel trim
- Protective undercoating phosphochromate treatment
- Sealed to IP67
- Techno polymer Rough in Housing 017 / 018 / 019
- Soda-lime tempered glass 12mm
- Silicon sealing gasket
- Supplied with pre-wired cable 0.5m long HO7RN8-F with brass cable gland M20 $\varnothing$ 7 / 13mm
- Wire through connection available on request
- Drainage area 300mm
- Maximum static pressure load 2500kg

Applications

- Architectural
- In ground / surface recessed

ARCHITECTURAL LIGHTING

PESCARA AL21700

IP65

Technical Features

- Power: LED 50.5W (59W total power)
- Weight: 23.8kg
- Available in 2700K, 3000K, 4000K and 5000K colour temperatures
- Luminous flux (light source flux): 5808lm, 6060lm, 6648lm, 6754lm
- Available in two distribution options: Asymmetric and Batwing
- IP65 rated
- Protection Class I (IEC - EN60593)
- CE, ENEC, RoHS certified
- ADC3 die-cast aluminium alloy light output ring and light source frame
- Marine grade fiberglass top canopy with internal steel frame reinforcement
- Water vapour resistant silicone gasket

- Anti-corrosion pre-treatment then finished in an AKZO-NOBEL UV resistant polyester powder coat
- PMMA internal LED optical lens behind 4mm tempered glass 1090 anodized 1.2mm 99.85% purity aluminium reflector
- Input Voltage: AC220-240V
- Ambient temperature tested -40°C ~ +50°C
- Withstand wind speed 45m/s
- Service life ≥35000 hours
- For best results, use on columns up to 6m

Applications

- Amenity
- Architectural

LENA AL22200

IP65

Benefits

- Internal drivers and electrics protected from the elements by the durable rated IP65 body
- Blends into surroundings with two clean finishing options

Features

- Power: 16.9W
- Colour temperature 5000K as standard
- CRI: 83
- Array lumens: 2089lm
- Delivered lumens: 1384lm
- IP65 rated
- Rated life: 50000 hours
- 5 year warranty

- CE marked
- Electronic dimmable 1:10V (10%-100%)
- Inventronics IP65 driver 18W
- PCB board 15W
- Efficacy lumens per circuit watt: 122 L/CW at LED array, 81 L/CW
- Clear polycarbonate outer lens
- Medium beam spread
- Aluminium cone reflector
- Bollard available in stainless steel or black aluminium painted finished
- Cap available as dome or flat top
- Set into concrete and fixed with 8" anchor bolts
- Optional 2.5kV surge protection

Colours

- Black
- Stainless steel

RADA AL22300

IP65

Benefits

- Ease of maintenance and upgrade via internal driver tray
- Internal drivers and electrics protected from the elements by the durable rated IP65 body

Features

- Power: 26W
- Colour temperature 4100K as standard
- CRI: 80+
- Delivered lumens: 2282lm
- IP65 rated
- Rated life: 50000 hours
- 5 year warranty

- Electronic driver 120-277V, 50/60Hz dimmable driver
- Internal driver tray
- Reflective white polycarbonate cone reflector
- Clear polycarbonate lens
- LED: 4 Chip-on-board
- Extruded aluminium housing, finished in a black powdercoat over a chromate conversion coating
- Flush mounting base and flat top
- Vandal-resistant screws
- Mounting kit with 200mm anchor bolts

LEVATA AL21800 BOLLARD

IP65

Technical Features

- Three wattage options: 7W, 14W or 25W
- Face shape options: square, round or oval
- Bollard height options: 500mm, 900mm or 1200mm
- Two possible light distributions: one way or two way (as specified in the product table)
- IP65 rated
- Class I protection
- 6063 aluminium alloy post
- ADC3 die-cast aluminium alloy housing
- 1090 high purity aluminium reflector with filter hood light control
- Water vapour resistant silicone gasket
- Stainless steel fixings, allen headed screws
- Galvanised steel recessed frame
- Mechanical and chemical anti-corrosion pre-treatment, powder coated with 10 year normal UV protection
- Integrated electronic driver with thermal and overload protection
- Surge protection 4kV
- Waterproof cable at maximum ø10mm insert to luminaire
- Ambient temperature tested: -40°C ~ +50°C
- Matching wall versions available as part of the Levata LED family

ADARA AL11400 UP / DOWNLIGHT

IP65

IK06

Benefits

- Powerful LEDs offer energy savings and cost reduction for maintenance
- Luminaire housing has a high resistance to UV and is treated with highly antioxidant water-repellent lubricating solution to lengthen lifespan
- Available in anthracite or light grey for architectural use
- Highly efficient thermoplastic with high vacuum deposit for heightened luminaire care
- 15° or 50° beam option offer effective and evenly distributed up / downlighting
- Design allows for ease of maintenance

Technical Features

- Wall mounted luminaire
- Integral driver
- Double powder coated polyester finish with high resistance to UV and oxidation
- Sealed to IP65
- Stainless steel A4-70 treated external fixings
- Extruded aluminium housing EN AW-6063 T5 / EN-AB 47100
- Soda-lime tempered glass 4mm
- Silicon sealing gasket
- Polypropylene cable gland M16 ø5, 5 / 10mm

INDUSTRIAL LIGHTING

INDUSTRIAL LIGHTING

INDUSTRIAL LIGHTING

H-LUM AL60500

IP65

IK08

H-LUM light is a durable, highly effective industrial LED luminaire for high ceiling installation. It is an ideal solution for distribution centres, production facilities, and warehouses or gyms, which require high illumination but minimum maintenance. With a finely engineered housing, made of anodised, extruded aluminum, H-LUM fixture dissipates heat and keeps the LEDs inside cool and bright for years.

In association with
 LUMENIA

Benefits

- Low maintenance
- Easy to mount
- Detachable driver
- Durable die cast aluminium housing
- Optics to suit all applications
- Dimming options available

- Emergency option available
- Protection against overheating

Applications

- Industrial
- Amenity

Colour

-  Silver Matt

Technical Features

- IP65 and IK08 rated
- Efficacy up to 149 lm/W
- CRI >80
- Colour temperature 4,000K
- Surge protection 2kV / 4kV
- Controls; Dali

Motion detector

Reducing energy consumption of buildings is no longer possible just with an integration of highly efficient LEDs. Integrated sensor solutions provide additional energy savings and dynamic control of the light, not only with presence detection, but also with measuring the daylight and adjusting the light levels of the light. Because the H-LUM luminaires are suitable for high installations, we provide the PIR technology of the sensors. There are two solutions available in order to optimise the usage of

them. The sensors can be used for mounting heights up to 7m and up to 15m and provide a wide detection area. Programming or commissioning of the sensors can be done by using IR handheld unit, from the ground.

Functional specifications

- ▶ Daylight sensing
- ▶ Time delay function
- ▶ Adjustable detection sensitivity
- ▶ Programmable via optional IR handset
- ▶ ON / OFF override via optional IR handset

Sensor reference	Sensor technology	Mounting heights	IR remote programming	Additional masking shields to tailor detection zones
MD7	PIR	7m	Optional IR handheld unit	No
MD15	PIR	15m	Optional IR handheld unit	Yes

Q-LUM AL61200

IP65

IK08

Q-LUM is a unique industrial LED lamp with a thoughtfully designed gasket, end caps and extruded profile that provide a high level of protection against dust and water permeation. It is made of polycarbonate, and is high heat and shock resistant. The Q-LUM LED is ideal for garages, production facilities, workshops, and corridors.

In association with
LUMENIA

Benefits

- Low maintenance
- Long lifetime
- Energy saving
- Easy to mount

Applications

- Industrial

Colour

- Silver (RAL 7035)

Technical Features

- IP65 and IK08 rated
- Plug & play lightweight installation
- Quick access to connectors
- Efficacy up to 112 lm/W
- CRI >80
- Controls: DALI (optional)

ARDUO AL22700

IP65

Benefits

- Continuity without changing fitting with covers to suit lighting requirements

Technical Features

- Power: 17W (System power 19.5W)
- Colour temperature 5000K as standard
- Available in two sizes
- Available with half eyelid cover
- Heavy-duty die-cast aluminium housing and top frame with powdercoat finish
- Can be tapped for side conduit entry
- LumaLens clear or opal polycarbonate vandal-resistant lens
- LumaFit LEDs on aluminium boards
- Surface mount with included brackets (optional adjustable brackets available)

- Dimmable driver
- 5 year warranty
- Rated life: 50000 hours
- Voltage 120 - 277V, 50/60Hz
- Operating temperature -40°C ~ + 40°C

ABACUS – FIRST CHOICE FOR SAFETY

ROAD LIGHTING

ROAD LIGHTING

E-LUM AL62000

IP66

IK09

An aerodynamic road lighting luminaire designed to integrate perfectly into urban spaces. With its modular construction, upgrades and replacements of key components such as; power supply, light engine and LED modules, ensure the luminaire takes full advantage of technological improvements.

Available in two body sizes and offering 10 standard lumen packages, from 1,450 to 19,350 lumens, the AL62000 Series comes with six different optics to suit a wide variety of lighting scenarios.

In association with
 LUMENIA

Benefits

- Easily maintained
- Durable die cast aluminium housing
- Flexibility with vertical or horizontal spigot mounting
- Multiple optics
- -40°C to +40°C

Technical Features

- Controls; Dali, 1-10V, RF or PLC (specify at enquiry)
- Efficacy up to 112 lm/W
- Integrated 5 level dimming module (optional)

- Protection against overheating
- Constant light output (optional)
- Time-dependant luminous flux control
- Power reduction; flexible luminous flux
- IP66 and IK09 rated
- Colour temperature 4000K as standard (options available)
- CRI ≥ 70
- Power supply 220Vac - 277Vac
- Standard surge protection 4kV (10kV option available)
- Solar options available in 26W & 56W

Applications

- Road
- Open Area
- Rail
- Amenity

Guarantee	5 years on electrical, 10 years on mechanical	
Wireless control	Optional	

Installation

The rotor enables both side and post top mounting of the luminaire on a 60mm diameter pole. Angular adjustments can be made between 0-90° in ± 5° increments. A security system within the rotor mechanism prevents unintentional tilting, thus preventing possible damage occurring during installation or maintenance of the light fitting.

To provide maximum security and robustness of installation, four screws are used to fix the light fitting to the pole.

Mounting pole: ø60 mm (adapter available for other dimensions)
Tilt: 0 - 90°, step ± 5°

(000) Suitable for larger distance between poles and high mounting installations

(001) Suitable for wider roadways with smaller distances between poles

(002) Suitable for narrower roadways across roads, cycling and pedestrian areas

(010) Suitable for parking spaces and pedestrian crossings

(100) Suitable for parking spaces and small distance between poles

(101) Suitable for larger distance between poles and high mounting installations. Higher uniformity factor

(110) Suitable for wide roadways and parking spaces with smaller distances between poles

S-LUM AL61000

IP66

IK09

An innovative road lighting luminaire of modular construction designed with ease of maintenance in mind. Tool-less upgrades of key components such as power supply and light engine along with field-replaceable LED modules ensure the luminaire takes full advantage of future improvements in LED technology.

Constructed from high pressure die-cast aluminium, the AL61000 series is available in two body sizes and offers six standard lumen packages, from 1200 to 15,600 lumens.

In association with
LUMENIA

Benefits

- Tool-less quick access latch
- Screw-less maintenance
- Durable die-cast aluminium housing
- Vertical or horizontal spigot mounting
- Multiple optics

Technical Features

- Controls; Dali, 1-10V, RF or PLC (specify at enquiry)
- Efficacy up to 130 lm/W
- Integrated 5 level dimming module (optional)

- Overheat protection
- Constant light output (optional)
- Time-dependant lumious flux control
- Power reduction; flexible lumious flux
- IP66 and IK09 rated
- Colour temperature 4000K as standard (options available)
- CRI ≥ 70 (80 optional)
- Power supply 100Vac - 277Vac
- Standard surge protection 6kV

Applications

- Road
- Open Area
- Rail
- Amenity

APOLLO LED AL6666

IP66

IK10

In Association with:
KS KINGSUN

Benefits

- Easy assembly and maintenance
- Modular future-proof designed LEDs for easy maintenance
- Excellent thermal management
- High reliability and performance from Cree or Lumiled LEDs
- LM-80 compliant
- >50000 life time to 70% lumen maintenance
- Independent LED drive compartment with Philips Xitanium LED electronic driver(s) built in
- Adaptive for most bracket diameters
- Internal adjustable luminaire elevation

Technical Features

- A number of optics available for tailored performance A3 Type 3 Long as standard)

- Philips drivers (Xitanium), dimming available as an option 1:10 Dali
- Utilising CREE LEDs as standard or Lumiled LEDs as an option
- Adjustable mounting bracket to allow for luminaire elevation both bracket or post mounting solutions
- Post top and side mounted spigot entry positions 60mm & 40mm with adaptor accessory (State at time of quoting & ordering)
- NEMA Photoelectric interface option available
- CRI > 75

- CE and UL Certified

INDUS LED AL21000

IP66

IK08

Benefits

- Modern looking slim line luminaire for a positive aesthetic feel in a variety of surroundings and application areas
- Fitting equipped with an automatic anti-closing mechanism for safer assembly, installation and maintenance purposes reducing health & safety risks

Technical Features

- Classification I
- IP66 and IK08 rated
- Constructed to meet EN 60598-1, EN 60598-2-3 standards
- Power correction factor >0.9
- Power supply 220-240V / 50-60Hz VAC
- Overload and surge protection upto 10kV
- First brand LED mounted on a pressed aluminium circuit, highly heat dissipating Metal Core Printed Circuit Board (MCPCB)
- Die-cast aluminium body and cover with highly aesthetic aspect
- Spigot post top mounting and spigot side entry mount 46-76mm
- Extra clear 4mm tempered flat glass
- Replacement of the entire LED module including upper luminaire cover
- Power supply cable access through a PG 13.5 cable gland (IP68)
- Anti-ageing rubber gaskets with stainless steel closure clips
- Teflon pressure compensation filter
- Driver specification: high efficiency powersource and duration for external use
- Optional body with fin casing on the upper cover available upon request

INDUS CITY LED AL21000

IP66

IK09

Technical Features

- IP66 and IK09 rated
- XLP or XHP-70 LEDs
- Colour temperature 4000K
- CRI >70
- Power correction factor >0.9
- Constructed to EN 60598-1, EN 60598-2-3
- Programmable and high efficiency electronic power source and duration, knife switch included
- Power supply cable access through PG16 cable gland (IP68)
- Power supply 220 - 240V / 50 - 60Hz as standard
- Power supply available in 120 - 277V / 50 - 60 Hz VAC
- Insulation class I and II
- Programmable drive available
- Cable plate is complete with easily replaceable electronic unit
- L80 >70000
- L70 >80000

*Optional fin body

- Die-cast aluminium body finished in silver polyester powder (RAL 9006)
- Top cover available as a smooth case as standard, with option to have cross-sectional cooling fin case
- LED module replaceable as one unit including the upper cover
- Extra clear 4mm thick tempered flat glass
- Stainless steel closing clips and anti-ageing rubber gaskets
- Teflon pressure compensation filter
- Automatic anti-closing mechanism to prevent accidental closure during assembly and maintenance

- Post top or side entry with adjustable spigot
- Spigot entry $\varnothing 46 - \varnothing 76\text{mm}$

Applications

- Commercial
- Rail
- Road
- Amenity

Photometry

All the optics have CUT-OFF emissions with zero-impact when the floodlight is installed with the glass parallel to the ground.

AB1: for carriageway with a width greater than 0.85 times the height of installation; suitable for large & high speed road ways.

(B) Road width equal or less than 0.85 x the column height (pathways)

ABACUS – FIRST CHOICE FOR SPORTS LIGHTING

FLOODLIGHTING

Trent Bridge, Nottingham (Challenger® 3)

AAA-LUX RANGE

The AAA-LUX range of innovative high powered LED floodlights is built with control, safety and security in mind. The AL Series is designed for large area lighting in places such as ports and airports, whilst the high performance WS Series focuses on sports lighting.

The technical capabilities underpinning this LED range allows ease of control, instant start up and variable switching using the AAA-LUX lighting control management system. This system is capable of dimming or switching all or select sections of a lighting application, lighting via fingertip control or use of sensors, with pre-programmed lighting scenes available including an emergency function which brings all lights up to 100% power. Use of the systems tracking and analytical ability allows designated personnel to optimise for best performance and cost effective performance in addition to implementing preventative maintenance.

AL Series

- Large area lighting: ports, airports, car parks
- Mounting height between 12m and 45m
- Three illumination distributions: 60°, 90°, 180°

AL360 Series

- Large area lighting: ports, airports, car parks
- Mounting height upto 25m
- Illumination distribution: 360°

WS Series

- Sports floodlighting
- Six variations to suit

Light Control Management System (LCMS)

Control, switching and dimming of AAA-LUX floodlights is made possible by the use of a number of user friendly interfaces all connected to the LCMS via LEDxLINK protocol, either locally or remotely. Switchboxes, touchscreens and smart devices provide fingertip control to enable the selection of a number of pre-programmed lighting configurations. In addition, third party devices such as sensors, timers and software interfaces can be seamlessly integrated into the system, providing further functionality and security benefits.

Easy replacement

- Direct 400VAC or 240VAC connection
- Wireless control
- No complicated bracketry required

Electrically the luminaire will be connected to existing 400VAC / 200VAC electrical installations. Even the existing light switches can remain in place. However, in the case of new installations, cabling costs are significantly lower. First, the product has no in-rush of start-up current, resulting in a much simpler cabling layout and also, fuses can have a lower rating. Secondly, with the wireless control of the luminaires no extra control cabling is needed.

Energy saving - Total-cost-of-ownership

- Dimmed to the right level
- Switched on when needed
- Short ROI

Conventional luminaires are based on Metal Halide (MH) or High Pressure Sodium (HPS) lamps. These sources have a start-up and cooling period and cannot be dimmed. Over lifetime these lamps suffer from significant lumen depreciation, which means that new installations over-illuminate the area every night by approximately 40%. Even areas with no activity, but camera surveillance only, are illuminated at full power with MH or HPS light sources.

With the AAA-LUX lighting management system luminaires are set at the requested illumination level.

Areas with no human activities are dimmed to camera level, increasing energy savings above 70%. Beside this, the projected 15 year lifetime reduces lamp replacements costs as well. In many cases, our TCO model calculates breakeven times below 3 years.

AL SERIES LED

AL60, AL90, AL180, AL700

IP66

AAA-LUX®
THREE A LIGHTING

Benefits

- Wireless control simplifies operation for ease of use
- Centrally monitor and adjust power consumption
- Control system enables efficient planning of maintenance
- No re-lamping costs
- L80 70,000 hours at 25°C ambient
- Driver MTBF > 50,000 hours
- Instant startup allows the light to be switched on and off as and when required, thus saving energy costs by reducing power consumption from wasted light
- Flexible dimming to 10% for low use & security giving substantial energy savings over conventional HID lamps
- Increased system efficiency by reducing wasted light

Technical Features

- Controllable via smart devices, touchscreen or wireless switch box
- Mounting height 12-45m
- 3 phase as standard
- Single phase 230V option available
- Marine grade as standard
- Die-cast aluminium polyester powder coated body with integrated heat sink and flexible bracket mount
- Lenses installed behind toughened flat glass for maximum integrity of the lenses
- High powered 1.375kW luminaire (AL60, AL90, AL180)
- High powered 0.690kW luminaire (AL700)
- Dimmable in accordance with EN 12193
- Highly efficient optics

Lighting Distribution

- 60°
- 90°
- 180°

Applications

- Large area
- Ports & terminals
- Airports
- Car parks

Colour

- Grey

Lighting Control & AL Series

When different zones of a site require full lighting levels and others need to be dimmed at different times through the dark hours, the dimmed zones can be brought back up to full lighting levels instantly for emergencies or to allow maximum dimming duration between working time of the zones. This saves energy, keeps running costs low and increases the level of site security.

FLOODLIGHTING

RS SERIES LED

WS1005-WS6005

IP66

Lighting a sporting venue can be a challenge with residents living in close proximity.

The AAA-LUX RS Floodlight delivers unrivalled LED lighting on the field, with extreme low spill light for neighbouring houses. Councils, sports clubs and residents living close by agree the RS truly delivers the best of both worlds.

AAA-LUX®

Benefits

- Increased game experience, with improved visibility on the field, players and ball
- Reduction of stray light
- No start up time needed
- Can be retrofitted on to existing masts
- No extra installation costs or cables
- Flexible and easy to control
- Adjustable power consumption
- Dimming options which can be controlled remotely
- No re-lamping costs

Key Technical Features

- Superior colour rendering
- Improved uniformity
- Central monitoring and control
- Direct connection to 400 VAC

Accessories

- Light spill shield
- Aiming visor

Applications

- Sports

Colours

- Grey

WS2006RS on 15m mast

WS200RS calculated intensity vs. distance from mast at 15° tilt (standard)

Definitions

Standard:

STD luminaires are designed for an average ambient temperature of 30°C. The STD can handle high temperatures up to 40°C although it is recommended to switch to the HT version when, during normal operating hours, the ambient temperature is regularly above 30°C in combination with still winds.

Maximum power:

Product is optimised for maximum luminous flux (lm) instead of optimal efficacy (lm/W) and cannot be combined with High Temperature option.

High temperature:

Product is designed for high temperature environments and cannot be combined with Maximum Power option.

Lifetime:

Can only be assured when the system prohibits the luminaires working during daytime (not designed to operate in full sun load)

- All sensitive bolts, nuts, washers and mounting clips are made of Stainless Steel
- Light sources are made of corrosion resistant aluminum with low copper content

Luminaire technical information and dimming-power

The Gen6 products are available with various beams to accommodate different areas, mast heights and sports fields. For better light spill control, luminaires can be equipped with light spill caps.

STAD SERIES LED

IP65

The AAA-LUX WS-STAD series family of floodlights are a true retrofit for existing 2 kW Metal Halide (2.2 kW power dissipation) floodlights. The white light produced by the luminaire gives a daylight perception, which enhances play at all levels.

The Lighting Control Management System (LCMS) can wirelessly switch and dim the luminaires via the proprietary LEDxLINK protocol. In the absence of a LCMS, the luminaires switch on at full power.

Benefits

- Lightest weight on the market at 22kg
- 5 Year (20,000 hours) warranty as standard for LED and driver
- Hardened scratch resistant glass
- Class A LED's driven at max. 60%:
- Efficiency > 160lm/W
- High uniformity
- Stainless steel fastenings
- Anti-corrosion double coated aluminium body

Driver Features

- Class A capacitors with long lifetime
- IP65/66 glands oriented downwards
- High efficiency >95%
- High power factor >0.9 from 20-100%
- No in-rush current
 - No voltage peak
 - Reduces total power requirement
 - Reduced costs
- Automatic temperature protection. Protects against over / under voltage. Surge protection 6,000v

Accessories

- Light spill shield
- Aiming visor

Applications

- Sports

Colours

- Grey

Dimensions

The AAA-LUX Gen.6 is tested according to ANSI/UL1598 ISTM (In Situ Temperature Measurement). The built-in temperature protection dims the luminaire automatically, based on the ambient temperature. The graph below shows the maximum luminous output for the

different products per ambient temperature and wind still weather conditions. When the product is already dimmed with the LCMS control system, the temperature protection dims only when this dim level is lower than the set dim level.

FLOODLIGHTING

CHALLENGER® SERIES

THE RANGE THAT MEETS ANY CHALLENGE

PRODUCT

Our Challenger® product range is a serious contender for any floodlighting application. From stadia to grassroots pitches, industrial applications to golf courses, these products deliver superior floodlighting every time.

Specifically designed to meet any requirement, the series starts with the high performance Challenger® 1 for side-lit applications, moves on to the roof mounted Challenger® 2 and finishes with the mighty Challenger® 3 for larger stadia projects.

BENEFITS:

Here are just some of the Challenger® Series' features

- Effective obtrusive light control
- Precision aiming for superior results
- GORE™ membrane breather system for optimal performance
- Sturdy toughened glass and pressure die-cast bodies for longer outdoor life

Whatever your floodlighting needs the Challenger® series and our additional floodlighting products, AAA-LUX, Vela, Trent and Mura are sure to perform.

Abacus floodlighting for all architectural, security, utility and sports applications.

Hyderabad Stadium, India (Challenger® 3)

Kempton Park Racecourse, UK (Challenger® 3)

Edgbaston Cricket Ground, UK (Challenger® 3)

Winter Palace, St.Petersburg, Russia (Challenger® 3)

Vantovy Bridge (Challenger® 3)

FLOODLIGHTING

CHALLENGER® 1 AL6000

IP66

IK08

Benefits

- Reduced light overspill and glare with excellent forward throw of light
- Multiple options for effective light distribution as the adjustable lamp holder offers three variations of peak beam elevation
- Dark skies friendly fitting ideal for projects nearby residential areas with specific light regulations, with low light pollution ULOR 0%
- Ease of maintenance via two rear doors with no requirement for tools

Technical Features

- High powered lamp capabilities 1kW / 2kW metal halide
- 1000W and 2000W MHN-LA & MHN-FC 2200W, MH-TS2000W/XL, HQI-TS2000WNL
- High pressure die-cast aluminium type EN AC 43400
- Stainless steel clamps and fixings
- 6mm galvanised steel mounting bracket with M20 bolt hole

- 4mm tempered, low iron, high transmission glass
- IP66, IK08 ratings, CE
- Available in double asymmetric: narrow, medium and wide beam distributions
- 60° peak beam elevation as standard on all beam widths
- High purity, polished and anodised aluminium reflector system
- Lamp holder support can be adjusted for 55° and 65° peak beam elevation capabilities as standard
- Upward Light Output Ratio (ULOR): < 0% at 60° peak beam elevation

- Low light pollution resulting in a dark skies friendly lantern
- Front, rear and side cowl available
- Electrical connection box : (IP66) housing containing the ignitor and the power connection, located on the side of the stirrup
- Fitted with 2 x GORE™ membrane breathers for floodlight air pressure regulation
- Toolless lamp access via two rear doors, secured with hand operated latches

Applications

- Sport

Fells Point Tennis Club, Ireland

Easy Maintenance:

Access to the lamp by means of opening the rear door

Key features

Abacus Light Control System

Efficient, careful lighting design has given Abacus an international reputation for combining powerful, sharp illumination with low light pollution. Abacus' Lighting Control System – exclusive to the Challenger® 1 – features a series of complementary technologies to help achieve this.

Double Asymmetric Reflector

The double asymmetric reflector is designed to better concentrate and focus the light produced by each lantern. By emitting the main beam at an angle of 55, 60 or 65 degrees from the normal to the front glass, it results in a flat appearance (right), making less of the reflector visible to spectators as well minimising glare.

CHALLENGER® 3 AL5900

IP66

Benefits

- The Challenger® 3 delivers an optically precise symmetrical beam specifically designed and suited to stadium floodlighting requirements

Technical Features

- Body of high pressure die-cast aluminium, finished in light grey (RAL7035), polyester powder coating
- Reflector system of high purity, polished and anodised aluminium. Incorporating an internal baffle to improve efficiency and reduce glare
- Toughened front glass, secured by cast aluminium front frame
- Galvanised steel stirrup, with additional elevation locking screws
- Electrical connection box (IP66) housing ignitor, located on side of stirrup, fitted with 2 x Gore™ membrane breathers

- Designed to accept double ended, short arc 2kW or 1kW metal halide lamps
- Dual provision on side of floodlight body to attach gun sight aiming device to allow accurate beam alignment (AL5931)
- Easy access for re-lamping via opening of the rear cover. Positive closure via large stainless steel catch

Options

- Half concentric louvre (AL5921) or single blade visor (AL5922) to reduce light pollution.
- Gun sight aiming kit, incorporating gun sight and bracket (AL5931)

Lord's, London

F-LUM SERIES AL60900

IP66

IK08

An outdoor fixture used to illuminate medium sized areas. Available in a wide range of lumen output options and various symmetric and asymmetric beam angles. Featuring a die cast aluminium housing with cooling fins, long lifetime and high system efficiency.

Benefits

- Low maintenance
- Easy to mount
- Detachable driver
- Durable die cast aluminium housing
- Optics to suit all applications

Technical Features

- IP66 and IK08 rated
- Efficacy up to 150lm/W
- CRI >70
- Colour temperature 5,000K
- Surge protection 10kV/10kA
- Controls; Dali, 0-10V
- Protection against overheating

600W

900W

1200W

In association with
LUMENIA

Applications

- Sport
- Amenity
- Industrial
- Airport / Port

Accessories

- Precision aiming device
- Light spill shield
- Wireguard protection

F-LUM MIDI AL60700

IP66

IK08

A mid-sized outdoor fixture used to illuminate medium sized areas. Available in a wide range of lumen output options and various symmetric and asymmetric beam angles. Featuring a die cast aluminium housing with cooling fins, long lifetime and high system efficiency.

Benefits

- Low maintenance
- Easy to mount
- Durable die cast aluminium housing
- Compact size and lightweight

In association with
LUMENIA

Technical Features

- IP66 and IK08 rated
- Efficacy up to 144lm/W
- CRI >70
- Colour temperature 4,000 - 5,000K
- Surge protection 10kV
- Controls; Dali, 0-10V
- Protection against overheating

Applications

- Road
- Amenity
- Open area
- Sport

Optics

F-LUM MINI AL60800

IP65

IK08

A compact outdoor fixture used to illuminate small areas. Available in a wide range of lumen output options. Featuring a compact design and light weight, whilst maintaining excellent heat dissipation properties.

Benefits

- Low maintenance
- Easy to mount
- Durable die cast aluminium housing
- Compact size and lightweight

In association with
LUMENIA

Technical Features

- IP65 and IK08 rated
- Efficacy up to 132lm/W
- CRI >70
- Colour temperature 4,000K - 5,000K
- Surge protection 10kV
- Controls; Dali, 0-10V
- Protection against overheating

Applications

- Road
- Amenity
- Open area

110 degree

TRENT 2 LED AL5500

IP66

IK08

Symmetrical Small body 4
Low-medium lumen output

Symmetrical Large body 5
Medium-high lumen output

Benefits

- Maximum glare control allows for mounting indoors or at lower height to avoid glare for site users
- Aesthetic styling suitable for architectural and commercial locations

Technical Features

- IP66 and IK08 rated
- Class I as standard, Class II available on select ranges upon request
- Class I has surge protection fitted, up to 10kV protection
- Body 4 & 5 consist of a symmetrical distribution with 3 beam widths
- Body 8 & 9 consist of street lighting optics
- Multiple wattages available in all versions
- Programmable drivers on selected versions
- Die-cast aluminium and front frame, degreased and phosphor chromate treated with surface protection coat & polyester powder coating
- Double goniometric scale for ease of vertical aiming on site for body styles 4 & 5
- Tempered glass with high temperature thermal shock resistance, mechanically fixed into the frame
- Pressure compensation filter on the body
- High efficiency metalised polycarbonate vacuum formed reflectors
- Power correction factor >0.90
- Stirrup for bodies 4 & 5
- 60 or 76mm diameter post mount for bodies 8 & 9
- Access options : Hexagon stainless steel screws, or tool-less access by stainless steel securing clip. State on order
- Bodies 4 & 5 come with Multichip Philips Luxeon M LEDs
- Bodies 8 & 9 come with Luxeon T e or Cree XM-L2 LEDs

Cosmo Option - Asymmetric

Cosmo Option - Symmetric

Street Optic Large body 9
Medium-high lumen output

Street Optic Small body 8
Low-medium lumen output

- Mounted on a pressed aluminium circuit, highly heat dissipating Metal Core Printed Circuit Board
- Photobiological Risk Group exempt based on EN 62471

DOUBLE
ASYMMETRIC

IP66

IK08

Benefits

- Maximum glare control allows for mounting indoors or at lower height to avoid glare for site users
- Aesthetic styling suitable for architectural and commercial locations
- Reduces maintenance risks with a knife switch to interrupt the power feed upon opening

Technical Features

- IP66 and IK08 rated
- Class I as standard, protected against surges upto 10kV
- Asymmetrical lighting distribution
- Available in four distribution angles
- Available in two body sizes
- Multiple wattages available in the 16 LED and 20 LED versions
- Programmable drivers on selected versions
- Die-cast aluminium body and front frame in polyester powder coating
- Galvanized steel bracket
- Extra clear 4mm thick tempered glass
- Power correction factor >0.90
- Philips LUMILEDS LUXEON M MULTICHIP LEDs

Body 4
12 LED

Body 5
16 LED

- Mounted on a pressed aluminium circuit, highly heat dissipating Metal Core Printed Circuit Board
- Compliant with EN 60598-1 and EN 60598-2-5
- Photobiological Risk Group exempt based on EN 62471

FLOODLIGHTING

MURA 2 LED AL5300

IP67

IK08

Benefits

- Design of optics gives maximum glare control and visual comfort for use at lower levels or in sporting applications where low height or indoor areas are to be lit
- Vertical orientation indicator allows for ease of elevating allowing for adaptability and quick adjustment to be undertaken during installation and maintenance

Technical Features

- IP67 and IK08 rated
- Class I
- RGB LED version with four pre-programmed light scenes with 12 variations available and light intensity dimming to 25%, 50% and 75%. A master unit controls up to 30 slave units to programme scenes by remote control
- Die-cast aluminium body and front frame
- Galvanised and painted steel bracket with vertical orientation indicator with stainless steel external screws
- Power correction factor >0.90
- Anti-ageing silicon rubber gasket

- Extra clear tempered 4mm thick glass sealed to the front cover
- Standard LED and RGB versions available, multiple wattages available in two body sizes
- Available in symmetrical or asymmetrical light distributions
- High efficiency metalised polycarbonate vacuum formed reflectors (none RGB version)
- LED types are mounted on a pressed aluminium circuit, highly heat dissipating Metal Core Printed Circuit Board
- Surge protection fitted, up to 6kV protection, option of 10kV
- Photobiological Risk Group exempt based on EN 62471

FLOODLIGHTING

VELA LED AL7000

Benefits

- Ease of maintenance and replacement of parts due to the modular construction
- Effective light control and low light output ratio (ULOR) with the design of the outer body and canopy

Technical Features

- Various wattages available: 200W, 400W, 600W
- 250W driver (IP67)
- Colour temperature: 5000K
- CRI: 70
- Cree / Philips Lumileds
- Single phase 230V
- Single plug and play high quality connector for power and controls
- Running current: 700mA
- Lumens per watt circa 102.5+lm / W
- 1-10V dimming available as standard
- Five distribution types available: narrow, medium, wide, extra narrow and extra wide

- Low upward light output ratio (ULOR)
- Die-cast aluminium black LED modules
- 3mm sheet aluminium outer body
- Polyester power coated body as standard, finished silver (RAL 9006)
- Mounting bracket options: under slung or over slung
- Modular construction

Applications

- Area
- Sport

Colour

- Silver (RAL 9006)

AMENITY LIGHTING

Amenity lighting is used to enhance and provide a safe night environment for the benefit of local residents, pedestrians, car park and road users.

It covers a wide range of general applications and purposes:

- To improve night time visual attractiveness and surroundings for residents and visitors
- To allow safer movement of pedestrians in the outdoor environment
- To offer outdoor car park users the appropriate level of lighting to balance the requirements of security, comfort and visibility
- To provide security lighting for local properties by deterring or revealing intruders
- To discourage violence, vandalism and crime by providing less concealment and allowing visual recognition of people within the night scene
- To provide low level general lighting of access roads, low traffic residential roadways and footpaths
- To provide the appropriate level of lighting for the level of security risk, be it low, medium or high

These requirements may usually be achieved by introducing relatively low lighting levels dependent, however, upon the overall purpose and degree of attractiveness desired. High levels of illuminance uniformity are usually unnecessary.

It is more important to ensure that minimum illuminance values are achieved in order to allow safe movement of pedestrians. The minimum values are determined in the relevant categories. The lighting of roadways should comply with the relevant code of practice or standard.

Increasing illuminance levels will also improve visual performance and instill in the pedestrian the psychological effect of increased safety, providing glare is controlled. Surround ratios of road and footpath illuminance against the illuminance of the surrounding area are governed by British and European standards (BS 5489-1 and BS EN 13201-2).

In the night environment a poorly designed lighting installation may produce lighting pollution. This can cause serious adverse effects, both physiological and ecological, in both urban and rural areas.

There are three distinct areas of light pollution: Overspill, Glare and Sky Glow.

The objective for the lighting system should be to limit these to an acceptable level for the location and application by careful design. By controlling obtrusive light, both the lighting quality and performance are increased.

Amenity lighting can create a positive effect. Showing luminaire form may enhance the night time appearance and reflections can also create attractive sparkle. Good amenity lighting should take into consideration all aspects of the lit environment.

Application	Lighting Level	Uniformity
Safety		
Safe pedestrian movement. Revealing obstacles and scene irregularities	1 Lux (min)	
For safe facial recognition (friend or foe)	5 Lux (ave)	
Outdoor Car Parks (ref: BS 5489-1:2003+A2:2008)		
Light traffic: Shop parking areas, housing, cycle parks	5 Lux (ave)	U _o = 0.25
Medium traffic: Parking at major stores, office buildings, sports and multi-purpose building complexes	10 Lux (ave)	U _o = 0.25
Heavy traffic: Parking areas at schools, churches, major sports and multi-purpose building complexes	20 Lux (min)	U _o = 0.25
Open Footbridges, Stairways & Ramps (ref: BS 5489-1:2003+A2:2008)	30 Lux (ave)	U _o = 0.5
Roadways & Public Amenity areas: (S, C, ME Classes) Please refer to BS 5489-1:2003+A2:2008 & EN 13201-2:2003 for guidance.		

U_o=E_{min}/E_{ave}. These are guidelines only

LIGHTING GUIDELINES

FLOODLIGHTING

The use of floodlights to illuminate exterior areas has a wide and varied range of applications.

Some typical categories are:

- General lighting
- Working areas
- Security
- Sports

Applications such as lighting for sports, security, airports, docks and the illumination of hostile and hazardous environments often require specialist attention. Our lighting design service is available to advise on these and all other aspects of exterior lighting. You can also refer to the Abacus Sports Lighting Solutions brochure and the Abacus website for detailed information on standards and recommended solutions.

General and working areas

Most general and working areas are illuminated by floodlights mounted on masts or buildings. The type of floodlight, lamp selection and mounting height are dependent upon the overall size of the area, illuminance level, visual task, site restrictions and the cost effectiveness of the overall design.

Calculations

All general exterior lighting calculations will include a maintenance factor due to depreciation caused by various elements. Where a 'Maintained Illuminance Level' is required, it is necessary to incorporate a full maintenance factor comprising all depreciation factors:

1. Depreciation due to build-up of dirt on a luminaire
2. Lamp lumen depreciation
3. Lamp survival
4. Deterioration of internal reflecting surfaces
5. Atmospheric losses

The use of a 'Maintained Illuminance' should ensure the specified illuminance level is always provided during the period to planned maintenance. It is of particular importance in specifications for sports lighting.

Application	Lighting Level	Uniformity
Safety & Security		
Very low risk: occasional light traffic areas	5 Lux (ave)	Uo = 0.25
Low risk: General lighting – occasional use	10 Lux (ave)	Uo = 0.40
Medium risk: Storage areas with frequent traffic	20 Lux (ave)	Uo = 0.40
High risk: Operational areas requiring high levels of safety	50 Lux (ave)	Uo = 0.40
Industrial Sites & Storage Areas		
Short term handling of large units and raw materials. Loading and unloading of bulk goods	20 Lux (ave)	Uo = 0.25
Continuous handling of large units and raw materials. Loading and unloading of freight; open loading platforms	50 Lux (ave)	Uo = 0.40
Reading documents; using tools	100 Lux (ave)	Uo = 0.50
Demanding work; machine operation, inspection	200 Lux (ave)	Uo = 0.50
General Circulation Areas		
Pedestrian walkways	5 Lux (ave)	Uo = 0.25
Slow moving traffic areas	10 Lux (ave)	Uo = 0.40
Regular traffic areas	20 Lux (ave)	Uo = 0.40
Pedestrian use, turning vehicles, loading and unloading points	50 Lux (ave)	Uo = 0.40
Please refer to BS EN 12464-2:2007 or CIE S 015E:2005 for a wider range of application guidance		

These are guidelines only

COLUMNS & MASTS

BASE-HINGED COLUMNS

PRODUCT

Why not consider the base-hinged column for your car park or large area lighting project? The benefits of a simple and quick maintenance solution are clear. Ground level operation and lamp change, means there's no need to work at heights. The 4m to 8m spring operated light duty range, for example, can be lowered for maintenance in less than one minute.

BENEFITS:

Offering ground level maintenance for lantern cleaning, lamp change and column painting, the base-hinged column is available from a height of 4m up to a maximum of 50m. It is the best selling base-hinged column, and with good reason!

To see our columns in operation visit
www.abacushighting.com

COLUMNS & MASTS

We design, manufacture and install a variety of columns and masts. Base-hinged and fixed columns, and the widest range of high mast systems – even unique telescopic masts. Whatever your requirements, we'll either have a product in our range or we can design one for you.

Standard columns

Abacus manufactures and supplies a wide range of standard columns in tubular, octagonal and conical styles, often in a choice of galvanised steel or aluminium. We also offer a variety of brackets designed to accommodate most standard luminaires, as well as a bespoke service, tailoring columns and brackets to specific requirements for your project.

A range of three architecturally styled columns, type LoCone, HiCone and Classic, are available with complementary brackets. A shield-shaped flush door enhances its appeal for amenity and architectural applications.

You can also enhance the appearance and longevity of your products with a wide range of paint finishes and surface protections; from standard finishes to specialist options such as marine and anti-graffiti protection.

High mast systems

Whether you need a mast for lighting a port or stadium, road junction or industrial facility, we have the right product for you. Choose from fixed masts, base-hinged or raising and lowering winch masts. We also manufacture masts for telecoms, wind turbines, CCTV, signage and a whole host of other uses, not related to lighting.

Telescopic masts

Our latest innovation is the unique telescopic mast system, perfect for addressing planning issues.

These masts can be raised using the latest touchscreen technology and are installed in some of the world's most iconic sports stadia.

PAINT SHOP FACILITY

COLUMN FINISHING & PROTECTION OPTIONS

Abacus offers a wide range of paint finishes designed to suit the requirements of our customers. Finishes are applied to the column once the column has been hot dip galvanised in accordance with the British and European standard, EN1461. Download the full list of options from our website.

INSTALLATION & MAINTENANCE FROM THE PROFESSIONALS

We also offer
maintenance
for non-Abacus
products

Installation

We are proud to offer a professional turnkey solution, from design through to installation. Our highly skilled installation teams work worldwide across a whole range of industries. We can supply everything from foundations to commissioning, either as a subcontractor or main contractor.

Let us take the worry out of your project by handling it, from start to finish.

Maintenance

At Abacus the great service doesn't stop with installation. Our fully qualified engineers can also offer you a variety of maintenance packages to suit every requirement.

Working at all heights, we will inspect and report on all aspects of your lighting system – including testing your electrical systems and cabling to certify compliance to NICEIC standards. We can also repair and replace key components and develop a tailored maintenance programme to suit your specific project.

Our reputation is built on providing professional and efficient maintenance services for a wide variety of customers. We are also a RISQS approved contractor for work on rail projects.

Our expertise covers all types of industry sectors including:

- Sports lighting systems
- Airport, port and industrial high mast floodlighting
- Retail parks and amenity lighting
- Railway lighting
- All hinged mast systems
- High masts with lowering headframes
- Fixed masts with and without ladders

Maintenance Elements designed around you

Abacus Maintenance Elements can be applied to a wide variety of applications:

- Sports lighting systems
- Retail parks & amenity lighting
- Airport, port & industrial high mast floodlighting
- Railway lighting
- Hinged & fixed masts
- High masts with lowering headframes
- Fixed masts with & without ladders
- Anything else? Give us a call
