

Meet the Hydropanel

Make, store, and dispense clean, mineralized water

Drinking water made from sunlight and air

Self-contained, elegant design

Delivers water directly to tap or faucet

Monitored[†] and optimized

How Do Hydropanels Work?

The **SOURCE**® Hydropanel is a technology that incorporates multiple patented inventions alongside proprietary trade secrets, making it a one-of-a-kind renewable water technology that uses the power of the sun to extract clean, pollutant-free drinking water from the air. Collected water is then mineralized for ideal composition and taste, making premium-quality drinking water a readily available resource.

A hydropanel is like a solar panel, but instead of creating energy, it creates clean, safe drinking water without electric hookups or infrastructure, nearly anywhere.

Here’s how it works:

1. The sun powers fans that pull pure water vapor out of the air

2. Warm air inside the panel turns water vapor into liquid water

3. The pure water is mineralized for health and taste

4. The self-contained system circulates the water and keeps it clean

5. Water can be plumbed directly into your home for easy enjoyment
